ABSTRACT

Fifty-one detailed tables provide information about educational and socioeconomic characteristics of students nationwide. Nursery school and college were the only levels of school with higher enrollment in 1981 than in 1970--88 percent and 45 percent higher, respectively. At the college level, the enrollment of more women and more older students (22 to 34 years old) has contributed to the 45 percent increase from 7.4 million students in 1970 to 10.7 million in 1981. Data are also presented from an October 1979 survey concerning college plans of high school students and specific types of courses high school students were taking. The socioeconomic characteristics covered include age, sex, race or ethnic group, residence in metropolitan or nonmetropolitan areas, marital status, family income, and membership in the labor force. The educational characteristics considered comprise enrollment at all educational levels (from preschool through higher education), educational attainment, public or private control of the institution, full- or part-time enrollment, and two-year and four-year college attendance. Appendixes extend the data back in time, as far as 1947 for some characteristics; define the methodological parameters of the report; and show the October 1979 enrollment status and college plans of high school students. TEXT TABLES

Table

A. School enrollment of persons 3 to 34 years old by level and race and percent change: October 1981 and 1970 2
B. School enrollment of persons 3 to 34 years old for persons of Spanish origin by level and percent change: October 1981 and 1972 2
C. College enrollment of persons 14 to 34 years old by age and percent change: October 1981 and 1970 2
D. Age distribution for college students 14 to 34 years old by sex: October 1981 and 1970 3
E. Selected characteristics of high school and college students by region: October 1979 4
F. Population and enrollment estimates by age: October 1981 5

DETAILED TABLES

Tables—October 1981

1. Enrollment status for persons 3 to 34 years old by age, sex, race, Spanish origin, and Mexican origin: October 1981 6
2. Enrollment status for persons 3 to 34 years old by residence, age, race, Spanish origin, and Mexican origin: October 1981 11
3. Level of enrollment for persons 3 to 34 years old by control of school, residence, sex, race, Spanish origin, and Mexican origin: October 1981 15
4. Level of enrollment for persons 3 years old and over by age and sex: October 1981 18
5. Attendance status for nursery school and kindergarten students 3 to 6 years old by level and control of school, residence, age, race, and Spanish origin: October 1981 19
6. Attendance status for college students 16 to 34 years old by sex, age, residence, year and control of college, race, and Spanish origin: October 1981 21
7. Enrollment status in 1980 for persons 14 to 24 years old by educational attainment, age, sex, race, and Spanish origin: October 1981 22
8. Year of high school graduation for persons 16 to 34 years old by educational attainment, enrollment status, sex, and race: October 1981 25
9. Enrollment rates for persons 3 to 34 years old by age, race, Spanish origin, and region: October 1981 27
10. Marital status for persons 14 to 34 years old by level and status of enrollment, attendance status, age, sex, and race: October 1981 28
11. Enrollment status of primary family members 3 to 34 years old by educational attainment of family householder, level and control of school, sex, race, and Spanish origin: October 1981 30
12. Primary families by college attendance of 18-to-24-year-old members, family income, race, and Spanish origin: October 1981 37

DETAILED TABLES—Continued

Tables—October 1981—Continued

Current Population Reports—school enrollment . . . . . Inside back cover

School Enrollment—Social and Economic Characteristics of Students: October 1981 and 1980

The 1981 data in this report are based on population estimates by age, race, and sex, consistent with the 1980 Census of Population, while the 1980 estimates are based on population estimates consistent with the 1970 Census of Population. In addition, a change in the method of identifying children of Spanish origin in the October CPS, beginning in 1980, increased the number of children recorded as being of Spanish origin. See Methodological Notes.

INTRODUCTION

This report presents data from the October school enrollment supplement to the Current Population Survey (CPS), collected in 1980 and in 1981. The statistical tables present data for students attending nursery school through college by age, race, Spanish origin, sex, marital status, household relationship, residence, and family income. The tables are limited to enrollment of the civilian noninstitutional population in regular schools, and thus exclude enrollments in special schools, vocational schools, and adult education classes. This report also contains summary data from earlier CPS surveys and a discussion of data on courses taken by high school students collected in the October 1979 supplement. Advance reports, based on the October 1980 and 1981 CPS data, covered changes in the number of persons enrolled in school and were released earlier as Current Population Reports, Series P-20, Nos. 362 and 373.

Total school enrollment of persons 3 to 34 years old declined by 3 percent between 1970 and 1981, from 60.4 million students in 1970 to 58.4 million in 1981 (table A). Nursery school and college were the only levels of school with higher enrollment in 1981 than in 1970, 88 percent and 45 percent higher respectively. An 18 percent decline in elementary school enrollment between 1970 and 1981 generally reflected the replacement of children born during the post-World War II baby boom by subsequent smaller birth cohorts. The number of high school students in 1981 was about the same as in 1970 (14.6 million); however, enrollment declined from an apparent peak of about 15.7 million in the period 1975-77. Kindergarten enrollment was 3.2 million in 1981 and in 1970; it reached 3.4 million in the middle of the decade.

At all levels below college, enrollment trends for males and females were about the same. There were different enrollment trends for Blacks and Whites, however, largely due to differences in the age structure of the population.[1] The birth rate for Blacks has been higher than for Whites and the decreases in births following the baby boom were slower for Blacks than for Whites. White enrollment in elementary school (grades I to 8) dropped 21 percent from 1970 to 1981 and Black enrollment dropped only 12 percent (table A). At the high school level, White enrollment in 1981 was below the 1970 level and the 1975-77 apparent peak. For Blacks while there is some evidence that high school enrollment had declined since 1977, it was still above the 1970 level.

For persons of Spanish origin, school enrollment data were first available from the CPS in 1972. The number of persons of Spanish origin enrolled in school increased by 40 percent from 1972 to 1981 (table B). During the 9-year period elementary[2] and high school enrollment rose by one-third[3] for the Spanish origin population, in part due to rapid population growth which was caused by immigration and high fertility. College enrollment doubled.

College enrollment among persons 14 to 34 years old increased by 45 percent from 7.4 million students in 1970 to 10.7 million in 1981 (table C). Much of the increase is attributable to the population increase caused by the post-World War II baby boom, which lasted until the early 1960's, and part was due to increases in enrollment rates. By 1981, the cohort born in the peak birth years was almost beyond the peak college attendance ages. In fact, the number of persons in the 18 to 21 year old age group began to decline in 1981, while the number in the later 20's kept growing.[4] From 1970 to 1981, the number of older college students (22 to 34 years old) increased more than the number of young students. The number of older persons eligible to enroll in college increased more than the number of young eligibles and the enrollment rate for older persons increased while the rate for young persons did not. This resulted in the proportion of the student population under 22 years old dropping 10 percentage points from 1970 to 1981, to 54 percent. If we include the 1.2 million students over 34 years old[5], then students under 22 years old were only 48 percent of all students in 1981 (56 percent in 1972).

College	510	242	110.7

Table C. **College Enrollment of Persons 14 to 34 Years Old by Age and Percent Change: October 1981 and 1970**

(Numbers in thousands)

Age	Population		College students		Percent change 1970-81	
	1981	1970	1981	1970	Population	College students
Total	82,281	62,873	10,734	7,413	30.9	44.8
14 to 17 years old	15,270	15,718	232	260	-2.9	-10.8
18 and 19 years old	8,115	6,958	3,044	2,594	16.6	17.3
20 and 21 years old	8,365	6,118	2,545	1,857	36.7	37.0
22 to 24 years old	12,485	9,476	1,986	1,354	31.8	46.7
25 to 29 years old	19,780	13,415	1,717	939	47.4	82.9
30 to 34 years old	18,266	11,188	1,211	410	63.3	195.4

In 1970, there were 46 percent more men than women among college students 14 to 34 years old; by 1981, about equal numbers of men and women attended (table D). College enrollment increased for men (14 to 34 years old) by about 22 percent from 1970 to 1981. Women had significantly higher gains during the same period, about 78 percent. The number of women under 22 years old enrolled rose by 41 percent, while for women, 22 to 34 years old, the number enrolled more than doubled.

Table D. **Age Distribution for College Students 14 to 34 Years Old by Sex: October 1981 and 1970**

(In thousands)

Age	Men		Women	
	1981	1970	1981	1970

25 to 29 years old	909	684	808	255
30 to 34 years old	533	256	677	154

COURSE ENROLLMENT OF HIGH SCHOOL STUDENTS 1979

Recent widespread interest in high school curricula and course requirements which was stimulated by a report to the Secretary of Education by the National Commission on Excellence in Education[6] has made presentation of heretofore unpublished data from the October 1979 Current Population Survey timely. In October 1979, additional questions were included in the CPS school enrollment supplement concerning college plans of high school students and specific types of courses high school students were taking. Questions on high school enrollment in specific areas of vocational training such as business, health occupations, shop for vocational training, agriculture, distributive education, and cosmetology were included at the request of the Department of Education. In addition, three areas of study were included that could be considered college preparatory or academic—foreign languages, science (chemistry and physics), and mathematics (algebra 2 or 3, geometry, trigonometry, precalculus or calculus).

The questionnaire listed specific courses and was not exhaustive of all academic or vocational courses. While the courses have been summarized in the tables into "academic" and "vocational," students may have been taking other academic or vocational courses not referenced in the question. The three course areas listed as academic are widely held as part of an academic curriculum. The vocational courses cover the major vocational offerings. The survey did not identify whether particular high schools were academic or vocational. Also, it did not identify the students curriculum or track. The same questions were asked about all students in 10th through 12th grades. Some schools may not offer all of the courses listed, and, thus, the options may not have been the same for all students. Although the academic courses are nearly universally available (the variety and number of courses may differ), the specific vocational courses are not.

Enrollment in the three types of college preparatory courses was varied. In the 10th grade, half of all students were taking at least one mathematics course (table A-4), in the 12th grade, only one-third were taking a math course. Conversely, more 12th graders than 10th graders were taking chemistry or physics. The science courses enrolled 1-in-8 10th graders and 1-in-5 12th graders. Enrollment in foreign languages was highest among 10th graders with 31 percent and lowest among 12th graders with 14 percent.

Much of the between grade difference has to do with the sequencing of courses within school systems. Physics and chemistry are given in 11th and 12th grades most often. Foreign languages are begun early and many of those who are taking foreign languages in the 12th grade may be taking the third or fourth year of a language. Among all students, 12th grade students were least likely to be enrolled in any of the three academic courses, perhaps because required courses were finished early. Forty-four percent of 12th grade students were enrolled in at least one academic course compared with 58 percent of 10th and 11th grade students. Among those who planned to attend college, 61 percent of 12th graders and 79 percent of 10th and 11th graders were attending academic classes. Women were more likely than men to take foreign languages, and men were more likely than women to enroll in science and math; these relationships held in almost every grade. Over all grades, Whites were more likely than Blacks to be enrolled in each of the three academic areas (table A-4).

Whereas, the enrollment rate in academic courses was substantially lower for 12th graders than for 10th graders, the enrollment rate in vocational courses was not lower for seniors, but higher—42 percent for 10th graders and 48 percent for 12th graders. Between grade differences for the vocational subject areas were small. The number of students taking business education averaged 23 percent (varying 5 percentage points between grades). Enrollment in shop for vocational training averaged about 19 percent (varying about 2 percentage points between grades). A little more than 1-in-3 female high school students was enrolled in at least one business course compared to roughly 1-in-10 males (table A-5). By contrast, at least 1-in-3 males was in a shop class compared with 1-in-30 females. Each of the other vocational subjects enrolled less than 10 percent of all students. The enrollment rates of White and Black students in the vocational courses were not significantly different (table A-4), except in agriculture, in which Whites were slightly more likely than Blacks to be enrolled and in health occupations for which there is some evidence that Blacks were more likely than Whites to enroll. (In both areas enrollment rates were 4 percent or less.)

Home economics was not included among vocational courses in this study but it enrolled 1-in-5 females compared with less than 1-in-20 males, and a slightly higher proportion of Blacks than Whites. A course like typing for personal use was not considered a vocational course, but was added to allow respondents to separate that kind of course from business typing. Twelve percent of those planning to attend 4-year colleges were taking typing compared with 4 percent of those with no college aspirations.

[6]National Commission on Excellence in Education, **A Nation at Risk, The Imperative for Educational Reform**, April 1983.

HIGH SCHOOL COURSES AND COLLEGE PLANS

Post high school plans were strongly related to the types of courses in which high school students enrolled. While 1-in-5 high school seniors who did not plan to attend college was enrolled in courses in at least one of the three academic areas, 3-in-5 of those who planned to attend college were in academic courses (table A-5).

About half (49.4 percent) of seniors planned to attend college. Slightly over half of those, or 28 percent of all seniors, intended to go directly to 4-year colleges. Fifteen percent of seniors planned to attend a 2-year college and then a 4-year college, and 7 percent planned to attend a 2-year college only. In addition, 22 percent reported they *might* attend and 28 percent had no plans for college (did not plan to attend or did not report plans). Seniors who intended to enroll in a 4-year college only were most likely to be taking academic courses; 75 percent were attending at least one academic course. Of others who planned to attend college, 47 percent of those planning to attend a 2-year college and then a 4-year college, and 36 percent of those expecting to attend a 2-year college only were in the academic classes. Seniors planning to enter 4-year colleges were most likely to be taking courses in each of the academic areas—30 percent were taking a foreign language, 47 percent physics or chemistry, and 61 percent mathematics (table A-5).

Roughly half (48 percent) of all seniors were enrolled in vocational courses, including 41 percent of seniors who definitely planned to attend college and 58 percent of other seniors. Seniors who intended to attend a 2-year college only, were much more likely than those who intended to attend only a 4-year college to enroll in a vocational course, 66 percent versus 32 percent. Of those who planned to attend both types of school 47 percent were taking vocational courses. Thus it appears, that the vocational courses serve a greater variety of students than the academic courses. College bound students were much more likely to take academic courses than were noncollege bound students, but the proportions of each student group enrolled in the vocational courses were not as different.

REGIONAL VARIATION IN COURSE ENROLLMENT

One of the most interesting aspects of the data is the large difference between geographic areas. The proportion enrolled in each academic subject, at each grade level, was greater in the Northeast than in the other regions. Enrollments in the other three regions were not significantly different from each other in the majority of subjects and grades.

Of all 10th to 12th grade students in the United States, 54 percent were taking at least one of the three academic courses (table E). In the Northeast, the proportion was 62 percent. In the three other regions the proportion averaged 51 percent. In the separate fields, the proportions enrolled were higher in the Northeast than in other regions. In foreign language, the proportion for the Northeast was 35 percent; the other three regions averaged 20 percent. In physics and chemistry, the proportion for the Northeast was 28 percent compared to 17 percent for the rest of the country. And for mathematics the figures were 54 percent and 42 percent, respectively.

The differences cannot be fully explained by any single factor. The regions are not very different in college expectations. In fact, the proportion expecting to attend college is highest in the West at 57 percent for seniors; the other regions are not different from each other and averaged 48 percent (table E). However, the proportion of the expected attendance which will at least begin in 2-year colleges was substantially larger in the West than in other regions. As noted earlier, seniors planning to attend a 4-year college only were most likely to be enrolled in academic courses. There is some evidence that seniors in the Northeast were more likely than those in the remainder of the country to plan to attend only a 4-year college (30 percent compared with 25 to 28 percent in other regions).

METHODOLOGICAL NOTES

In October 1981, 58.4 million persons 3 to 34 years old were enrolled in school (table 1). These survey data are based

Table E. **Selected Characteristics of High School and College Students by Region: October 1979**

(Numbers in thousands)

[1]Region of residence may be that of student's parents (the household of which student is a part) rather than of the student if he/she is living away at school.
[2]Formerly North Central.

on population estimates which are consistent with the 1980 Census of Population. The CPS estimates of school enrollment for 1981 are not directly comparable with the estimates for 1972 to 1980 which were based on population estimates consistent with the 1970 census; however, the comparability is better for the earlier years. The April 1, 1980, census population was about 5.5 million greater than the estimate for the same date obtained by carrying forward the 1970 census population with data on births, deaths, and (legal) international migration.[7] It is not known at this time how much of this difference, or "error of closure," is due to improvements in census coverage or to the enumeration of illegal immigrants not included in the estimate. (In contrast, the error of closure between the 1960 and 1970 censuses was small.)

The change in censuses on which the estimates are based had a significant effect on the age distribution and size of the population of school age, but there is virtually no effect on the proportions of each age group enrolled. Absolute numbers for 1980 and 1981 should be compared only with adjustments to reflect the differences shown in table F.

As a result of the 1970 to 1980 error of closure, independent estimates of the October 1981 civilian noninstitutional population based on the 1980 census are (generally) higher than estimates based on the 1970 census, as shown in table F for school ages. The overall effect is that estimated school enrollment in the 3 to 34 age span in October 1981 is 2.9 percent higher with 1980 census based population estimates (58.4 million) than with 1970 census based population estimates (56.9 million), as shown in table 1. As a consequence of the error of closure, presentation of annual data and calculation of change between years would show a growth in elementary and secondary enrollment between 1980 and 1981, if the 1981 (1980 based) data were used, simply because of the change in population estimates. In actuality a decline in enrollment occurred at both levels.

To reduce the impact of this discontinuity, comparisons of 1981 school enrollment data with comparable data for 1980 should be based on 1970 census based population estimates, and therefore two sets of estimates for 1981 are included in table 1. Comparisons of 1980 based data for 1981 with earlier years is less affected by the discontinuity. Therefore, in the text of this report 1981 enrollment data (using 1980 census based population estimates) are compared with data for 1972 and 1970.

Data on public and private enrollments are not available for high school and college for 1980; however, data on total enrollment and grade are available. The method used to collect the 1980 data for those students was not comparable with methods used for other years, so that data on type of school were not produced for 1980.

Large changes in the number of children reported as Spanish origin from 1979 to 1980 occurred because of changes in the method of classifying children as Spanish in the October school enrollment survey. This did not change the total number of children counted in the survey but did increase the number of children 3 to 13 years old classified as Spanish origin by approximately 23 percent. The basic CPS is for adults 14 years old and over. Spanish origin is reported for each adult. Prior to 1980, Spanish origin for children, was allocated from a parent.

Starting with the 1980 survey, Spanish origin was reported for all persons, including children, so that origin is no longer allocated on the basis of responses for older family members. Data on children of Spanish origin for 1980 and 1981 are consistent with each other but not with data for earlier years.

Appendix B. Definitions and Explanations

Population Coverage—The figures in this report for October 1981 and October 1980 are sample survey data and relate to the civilian noninstitutional population of the 50 States and the District of Columbia.

Introduction of 1980 Census Population Controls—The estimation procedure used for this survey involves the inflation of the weighted sample results to independent estimates of the civilian noninstitutional population of the United States by age, race, and sex. These independent estimates are based on civilian noninstitutional population counts from the decennial censuses and are updated with statistics on births, deaths, immigration, and emigration and statistics on the strength of the Armed Forces. Data published for 1972 through 1980 were based on independent population estimates derived by updating the 1970 Decennial Census counts. Starting with the data collected in the October 1981 Current Population Survey (CPS), independent estimates were based on civilian noninstitutional population controls for age, race, and sex established by the 1980 Decennial Census. In table 1, two sets of data are shown for 1981, using 1980 census based population estimates and 1970 census based population estimates. The 1970 based estimates have been included to provide continuity with previous years.

The April 1980 census population count differed somewhat from the independent estimates for April 1980 derived by updating 1970 census population figures. The April 1980 census count of the civilian noninstitutional population was 222,420,441, compared with the 1970 census based figure of 217,400,244 used for the CPS. Basically, this difference had little impact on summary or proportional measures, such as medians and percent distributions; however, use of the new controls could have significant effect on the absolute numbers. The effects can be seen in table 1 where estimates for 1981 are shown using both 1970 and 1980 census based estimates.

School Enrollment—The school enrollment statistics from the current survey are based on replies to the enumerator's inquiry as to whether the person was enrolled in school. Enumerators were instructed to count as enrolled anyone who had been enrolled at any time during the current term or school year in any type of graded public, parochial, or other private school in the regular school system. Such schools include nursery schools, kindergartens, elementary schools, high schools, colleges, universities, and professional schools. Attendance may be on either a full-time or part-time basis and during the day or night. Thus, regular schooling is that which may advance a person toward an elementary or high school diploma, or a college, university, or professional school degree. Children enrolled in nursery schools and kindergarten are included in the enrollment figures for regular schools, and are also shown separately.

Special schools are those which are not in the regular school system, such as trade schools or business colleges. Persons attending special schools are not included in the enrollment figures.

Persons enrolled in classes which do not require physical presence in school, such as correspondence courses or other courses of independent study, and in training courses given directly on the job, are also excluded from the count of those enrolled in school, unless such courses are being counted for credit at a regular school.

College Enrollment—The college enrollment statistics are based on replies to the enumerator's inquiry as to whether the person was attending or enrolled in college. Enumerators were instructed to count as enrolled anyone who had been enrolled at any time during the current term or school year, except those who have left for the remainder of the term. Thus, regular college enrollment includes those persons attending a 4-year or 2-year college, university, or professional school (such as medical or law school) in courses that may advance the student toward a recognized college or university degree (e.g. BA or MA). Attendance may be either full time or part time, during the day or night.

Two-Year and Four-Year Colleges—Students enrolled in the first 3 years of college were asked to report whether the college in which they were enrolled was a 2-year college (junior or community college) or a 4-year college or university. Students in the fourth academic year of college or higher were assumed to be in a 4-year college or university.

School Enrollment in Year Preceding Current Survey—An inquiry on enrollment in regular school or college in October of the preceding year was asked in the survey for persons 14 to 24 years old who were enrolled in college or not currently attending regular school.

Level of School—The statistics on level of school indicate the number of persons enrolled at each of five levels—nursery, kindergarten, elementary school (first to eighth grades), high school (ninth to twelfth grades), and college or professional school. The last group includes graduate students in colleges or universities. Persons enrolled in junior high school through the eighth grade are classified as in elementary school and the others as in high school.

Nursery School—A nursery school is defined as a group or class that is organized to provide educational experiences for children during the year or years preceding kindergarten. It includes instruction as an important and integral phase of its program of child care. Private homes in which essentially custodial care is provided are not considered nursery schools. Children attending nursery school are classified as attending during either part of the day or the full day. Part-day attendance refers to those who attend either in the morning or in the afternoon, but not both. Full-day attendance refers to those who attend both in the morning and afternoon.

Head Start—Children enrolled in Head Start programs or similar programs sponsored by local agencies to provide preschool education to young children are counted under Nursery or Kindergarten as appropriate.

Public or Private School—In this report, a public school is defined as any educational institution operated by publicly elected or appointed school officials and supported by public funds. Private schools include educational institutions established and operated by religious bodies, as well as those which are under other private control. In cases where enrollment was in a school or college which was both publicly and privately controlled or supported, enrollment was counted according to whether it was primarily public or private.

Full-Time and Part-Time Attendance—College students were classified, in this report, according to whether they were attending school on a full-time or part-time basis. A student was regarded as attending college full time if he was taking 12 or more hours of classes during the average school week, and part time if he was taking less than 12 hours of classes during the average school week.

Modal Grade—Enrolled persons are classified according to their relative progress in school, that is, whether the grade or year in which they were enrolled was below, at, or above the modal (or typical) grade for persons of their age at the time of the survey. The modal grade is the year of school in which the largest proportion of students of a given age is enrolled.

Age—The age classification is based on the age of the person at his last birthday.

Race—The population is divided into three groups on the basis of race—White, Black, and other races. The last category includes Indians, Japanese, Chinese, and any other race except White and Black. In this report, other races is not shown separately.

Spanish Origin—Information on origin or descent was obtained by asking, "What is (this person's) origin or descent?" Responses generally refer to a person's perceived national or ethnic lineage and do not necessarily indicate the country of birth of himself or his parents.

Persons of Spanish origin are persons who reported themselves as Mexican American, Chicano, Mexican, Mexicano, Puerto Rican, Cuban, Central or South American, or other Spanish origin. However, all persons who reported themselves as Mexican American, Chicano, Mexican, or Mexicano were combined into the one category—Mexican. Persons of Spanish origin may be of any race.

Basic School Enrollment Supplement

(Questions included in the October CPS since 1967 with appropriate date changes)

29. Is . . . attending or enrolled in school?
- Yes ○ *(Ask 30)*
- No ○ *(Skip to 34)*

30. Is it a public or private school?
- Private ○
- Public ○ } *(Ask 31)*

31. What grade or year is . . . attending?
- E1 E2 E3 E4 E5 E6 E7 E8 } *(End questions)*
- H1 H2 H3 H4 } *(End questions)*
- C1 C2 C3 C4 C5 C6+ } *(Ask 32)*
- Special School ○ *(Specify type and skip to 34)* ----------

32. Is . . . attending college full-time or part-time?
- Full-time ○
- Part-time ○ } *(Ask 33)*

33. Is this a two-year college or a four-year college or university? *
- 2-year college *(community or junior college)* ○
- 4-year college . . . . . ○ } *(Skip to 35)*

34. Is . . . taking any business, vocational, technical, or correspondence courses other than on the job training? **
- Yes ○
- No ○

35. INTERVIEWER CHECK ITEM:
- Age 14-34 ○ *(Ask 36)*
- Age 35+ ○ *(End questions)*

36. Was . . . attending or enrolled in a regular school or college in October 1979 that is, October of last year?
- Yes ○
- No ○ } *(Fill 37)*

37. INTERVIEWER CHECK ITEM:

High School Graduate *(Entries of "H4" and "Yes" in Control Card items 23a and 23b OR entry of "C1-C6+" in Control Card item 23a)* . . . . . ○ *(Skip to 39)*

Not High School Graduate
- Age 14-24 . . . ○ *(Ask 38)*
- Age 25+ . . . . ○ *(Go to next person)*

38. In what CALENDER year did . . . last attend regular school?
- 1980 ○
- 1979 ○
- 1978 ○
- 1977 ○
- 1976 ○ } *(Go to next person)*
- 1975 or earlier ○
- Never attended ○ } *(Go to next person)*

39. In what CALENDER year did . . . graduate from high school?
- 1980 ○
- 1979 ○
- 1978 ○
- 1977 ○
- 1976 . . . . . ○
- 1975 or earlier ○

*Added in 1972.
**Added in 1973. Not included in annual tabulations.

Questions on courses taken and college plans for students enrolled in 10th to 12th grades in the October 1979 survey follow.

33. Is ... taking any courses in any of these subjects in high school this fall? *(SHOW FLASHCARD)*
(Check all that apply)

- A foreign language
- Chemistry or physics
- Algebra 2 or 3, geometry, trigonometry, pre-calculus, or calculus
- Business education such as shorthand, bookkeeping, or secretarial typing
- Typing for personal use only
- Shop for vocational training such as auto, machine, electrical, construction, welding and other trades
- Agriculture or horticulture
- Health occupations education such as nursing or medical assistant
- Home economics
- Cosmetology
- Sales and marketing or distributive education
- None of the above

(Ask 34)

34. Does ... plan to attend a two-year community or junior college?
Yes / No / Maybe } *(Ask 35)*

35. Does ... *(also)* plan to attend a four-year college or university?
Yes / No / Maybe } *(Fill 36)*

36. INTERVIEWER CHECK ITEM
Entry of 'Yes' or 'Maybe' in item 34 OR 35 ... *(Go to next person)*
Entry of 'No' in items 34 AND 35 ... *(Ask 37)*

37. Does ... plan to attend any other school, such as a business college, barber college, technical or trade school or hospital school of nursing?
Yes / Maybe / No } *(Go to next person)*

College Plans—In October 1979, questions were asked for all persons enrolled in 10th through 12th grades. The respondent was first asked if the high school student planned to attend a 2-year community or junior college, then he/she was asked if the student planned to attend a 4-year college or university. The responses as shown in table A-5 were classified according to the following.

Item 34—2-year college:	Item 35—4-year college:		
	Yes	Maybe	No
Yes	2 year 4 year	2 year only	2 year only
Maybe	4 year only	Might attend 2 and 4 year	Might attend 2 year
No	4 year only	Might attend 4 year	No

Marital Status—The marital status category shown in this report, "married, spouse present," includes persons who are currently married and living with their spouse.

The category "other marital status" includes persons who are single (never married), separated, divorced, or widowed.

Family—The term "family," as used here, refers to a group of two persons or more related by blood, marriage, or adoption and residing together; all such persons are considered as members of one family.

Primary Family—A primary family is a family that includes among its members the persons or couple who maintains the household.

Family Head—In the CPS, the term "head of family" is used to refer to persons maintaining the household. This practice was discontinued in surveys conducted after the 1980 Census of Population. However, in surveys taken prior to the 1980 Census of Population, women were not classified as the "head of family" if their husbands were present.

Head Versus Householder—In the 1980 census, the Bureau of the Census discontinued the use of the terms "head of household" and "head of family." Instead, the terms "householder" and "family householder" were used. Recent social changes resulted in greater sharing of household responsibilities among the adult members and, therefore, made the term "head" inappropriate in the analysis of household and family data. Specifically, the Bureau reconsidered its longtime practice of always classifying the husband as the head when he and his wife are living together.

In the 1980 census, the householder was the first adult household member listed on the census questionnaire. The instructions called for listing first the person (or one of the persons) in whose name the home is owned or rented. If a home is owned jointly by a married couple, either the husband or the wife was listed first, thereby becoming the reference person, or householder, to whom the relationship of other household members was recorded. The same procedure was followed in the CPS surveys conducted after the 1980 census. Therefore, the Bureau is publishing the responses on relationship as given in the CPS — husband or wife could be the family householder.

Years of School Completed—Data on years of school completed were derived from the combination of answers to two questions: (1) "What is the highest grade of school he/she has ever attended?" and (2) "Did he/she finish this grade?"

The questions on educational attainment apply only to progress in "regular" schools. Such schools include graded public, private, and parochial elementary and high schools (both junior and senior high), colleges, universities, and professional schools, whether day schools or night schools. Thus, regular schooling is that which may advance a person toward an elementary school certificate, high school diploma, or a college, university, or professional school degree. Schooling in other than regular schools was counted only if the credits obtained were regarded as transferable to a school in the regular school system.

Family Income—In this report, family income is derived from a single question asked of the household respondent when a household first enters the sample and is updated on the anniversary of entry. Income includes money income from jobs; net income from business, farm, or rent; pensions; dividends; interest; social security payments; and any other

money income. The income of nonrelatives living in the household is excluded, but the income of all family members 14 years old and over, including those temporarily living away, is included. It should be noted that while characteristics of the person, such as age and marital status, and the composition of families refer to the date of the interview, family income statistics refer to receipts over a 12-month period starting 12 to 16 months prior to the interview.

The income tables include in the lowest income group those who were classified as having no income in the 12-month reference period and those reporting a loss in net income from farm and nonfarm self-employment or in rental income.

The detailed income tables include a separate category for families for which no income information was obtained. In most other CPR's showing income data, the missing income data have been allocated.

The money income level of families shown in this report may be somewhat understated. Income data from the October control card are based on the respondent's estimate of total family money income in broad, fixed income intervals. Income data collected in the March supplement to the CPS are based on responses to 11 direct questions asked about each person 14 years old and over and identifying 23 different sources of income in the preceding calendar year.

Previous research has shown that the use of broad income intervals to record money income tends to reduce the rate of nonreporting, while increasing the likelihood that the amounts reported will be significantly understated as compared with results from more detailed questions.

Metropolitan-Nonmetropolitan Residence—The population residing in standard metropolitan statistical areas (SMSA's) constitutes the metropolitan population. Except in New England, an SMSA is a county or group of contiguous counties which contains at least one city of 50,000 inhabitants or more, or "twin cities" with a combined population of at least 50,000. In addition to the county or counties containing such a city or cities, contiguous counties are included in an SMSA if, according to certain criteria, they are essentially metropolitan in character and are socially and economically integrated with the central county. In New England, SMSA's consist of towns and cities rather than counties. The metropolitan population in this report is based on SMSA's as defined in the 1970 census and does not include any subsequent additions or changes.

The population inside SMSA's is further classified as "in central cities" and "outside central cities." With a few exceptions, central cities are determined according to the following criteria:

1. The largest city in an SMSA is always a central city.
2. One or two additional cities may be secondary central cities on the basis and in the order of the following criteria:
   a. The additonal city or cities has at least 250,000 inhabitants.
   b. The additonal city or cities has a population of one-third or more of that of the largest city and a minimum population of 25,000.

Comparability of Metropolitan and Nonmeropolitan Data—Changes in CPS design and procedures over the last several years have made the annual series of sample population data for metropolitan and nonmetropolitan areas inconsistent. Analytic comparisons of year-to-year changes in these figures should be avoided. Trends in metropolitan and nonmetropolitan population growth from 1970 to 1981 and from 1976 to 1981 should not be appreciably affected by the procedural changes.

The major revisions to the CPS sample design and estimation methods have involved the expansion of the number of sample units from 55,000 housing units to 69,000 housing units. This incorporation of approximately 10,000 supplemental housing units into the CPS sample in 1977 was accompanied by new procedures for inflating the sample results to reflect national estimates. It was determined subsequent to the introduction of the additional sample that the new procedures used for processing the 1977 and 1978 CPS supplement data had resulted in an apparent overestimate of the nonmetropolitan population and corresponding underestimate of the metropolitan population for those years. Another revision of the weighting process was introduced in 1979 to correct the problem discovered in the earlier procedures. The result of this change was a large spurious increase in the metropolitan population and decrease in the nonmetropolitan population relative to 1978 levels.

Other operational changes including the introduction of a coverage improvement sample designed to provide greater accuracy in survey estimation occurred in 1979. The net effect of all changes in procedure was to increase the metropolitan area estimates.

Geographic Regions—The four major regions of the United States, for which data are presented, represent groups of States, as follows:

Northeast—Connecticut, Maine, Massachusetts, New Hampshire, New Jersey, New York, Pennsylvania, Rhode Island, and Vermont.

Midwest[1]—Illinois, Indiana, Iowa, Kansas, Michigan, Minnesota, Missouri, Nebraska, North Dakota, Ohio, South Dakota, and Wisconsin.

South—Alabama, Arkansas, Delaware, District of Columbia, Florida, Georgia, Kentucky, Louisiana, Maryland, Mississippi, North Carolina, Oklahoma, South Carolina, Tennessee, Texas, Virginia, and West Virginia.

West—Alaska, Arizona, California, Colorado, Hawaii, Idaho, Montana, Nevada, New Mexico, Oregon, Utah, Washington, and Wyoming.

Symbols—The following symbols are used throughout the tables:

–	Represents zero or rounds to zero.
B	The base of the derived figure is less than 75,000.
(X)	Not applicable.
(NA)	Not available.

Rounding of Estimates—Individual figures are rounded to the nearest thousand without being adjusted to group totals which are independently rounded. With few exceptions, percentages are based on the rounded absolute numbers.

[1]Formerly North Central.

Appendix C. Source and Reliability of Estimates

SOURCE OF DATA

Most of the estimates in this report are based on data collected in October 1981 and 1980 from the Current Population Survey (CPS) conducted by the Bureau of the Census. The monthly CPS deals mainly with labor force data for the civilian noninstitutional population. Questions relating to labor force participation are asked about each member 14 years old and over in each sample household. In addition, supplementary questions regarding school enrollment are asked about all eligible household members 3 years old and over each October.

The present CPS sample was initially selected from the 1970 census file and is updated continuously to reflect new construction where possible. The October 1981 and 1980 samples were spread over 629 areas comprising 1,133 counties, independent cities, and minor civil divisions with coverage in each of the 50 States and the District of Columbia. The October 1981 sample is composed of approximately 60,000 occupied households that are eligible for interview. Of this number, about 2,000 occupied units were visited, but interviews were not obtained because the occupants were not found at home after repeated calls or were unavailable for some other reason. The following table provides a description of some aspects of the CPS sample designs in use during the referenced data-collection period.

Table C-1. **Description of the October Current Population Survey: October 1947 to 1981**

Time period	Sample areas	Housing units eligible	
		Interviewed	Not interviewed
October 1981	629	58,000	2,000
October 1980	629	63,500	2,500
October 1977, 1978, and 1979	614	54,000	2,500
October 1972 to October 1976	461	45,000	2,000
October 1969, 1970, and 1971	449	48,000	2,000
October 1965	357	33,500	1,500
October 1960	333	33,500	1,500
October 1955	230	21,000	500 to 1,000
October 1947 and October 1950	68	21,000	500 to 1,000

The estimation procedure used in this survey involved the inflation of the weighted sample results to independent estimates of the total civilian noninstitutional population of the United States by age, race, and sex. These independent estimates were based on statistics from decennial censuses; statistics on births, deaths, immigration and emigration; and statistics on the strength of the Armed Forces. The independent population estimates used to obtain data for 1981 in this report are based on the 1980 Decennial Census, except for some of the data in table 1 which were obtained using independent population estimates based on the 1970 Decennial Census. Any display of 1981 data using 1970 census based population estimates is so noted. The data in the detailed tables 17 through 32 for 1980 are derived from independent estimates based on the 1970 Decennial Census. Also, in earlier reports in this series (P-20), data for 1972 through 1979 were obtained using independent population estimates based on the 1970 Decennial Census. Estimates for earlier years were based on earlier censuses. For more details on this change, see the section in appendix B entitled **Introduction of 1980 Census Population Controls.**

RELIABILITY OF THE ESTIMATES

Since the CPS estimates are based on a sample, they may differ somewhat from the figures that would have been obtained if a complete census had been taken using the same questionnaires, instructions, and enumerators. There are two types of errors possible in an estimate based on a sample survey—sampling and nonsampling. The standard errors provided in this report primarily indicate the magnitude of the sampling error. Also, they partially measure the effect of some nonsampling errors in response and enumeration, but do not measure any systematic biases in the data. The full extent of nonsampling error is unknown. Consequently, particular care should be exercised in the interpretation of figures based on a relatively small number of cases or on small differences between estimates.

Nonsampling Variability—As in any survey work, the results are subject to errors of response and nonreporting in addition to sampling variability. Nonsampling errors can be attributed to many sources, e.g., inability to obtain information about all cases in the sample, definitional difficulties, differences in the interpretation of questions, inability or unwillingness of respondents to provide correct information, inability to recall information, errors made in collection (such as in recording or coding data), errors made in processing the data, errors made in estimating values for missing data, and failure to represent all sample households and all persons within sample households (undercoverage).

Undercoverage in the CPS results from missed housing units and missed persons within sample households. Overall undercoverage, as compared to the level of the 1980 Decennial Census, is about 7 percent. It is known that CPS undercoverage varies with age, sex, and race. Generally, undercoverage is larger for males than for females and larger for Blacks and other races combined than for Whites. Ratio estimation to independent age-sex-race population controls, as described previously, partially corrects for the biases due to survey undercoverage. However, biases exist in estimates to the extent that missed persons in missed households or missed persons in interviewed households have different characteristics than interviewed persons in the same age-sex-race group. Further, the independent population controls used have not been adjusted for undercoverage in the decennial census.

Comparability With Earlier CPS Data—In using metropolitan and nonmetropolitan data, caution should be used in comparing estimates for 1977 and 1978 to each other or to any other years. Methodological and sample design changes occurred in these years resulting in relative large differences in the metropolitan and nonmetropolitan area estimates. However, estimates for 1979 and later are comparable as are estimates for 1976 and earlier.

A number of changes were made in data collection and estimates procedures in 1980 and 1981. In 1980 the major change was the use of the "householder" concept instead of the traditional "head" concept. The other major change occurred in 1981 in the estimation procedure. Also, due to this later change, caution should be used when comparing estimates for 1981 and later, which reflect 1980 census-based population controls, to those for 1971 through 1980, which reflect 1970 census-based population controls. The change in population controls had relatively little impact on summary measures such as means and medians, but it did have a significant impact on levels. For example, use of 1980-based population controls resulted in about a 2-percent increase in the civilian noninstitutional population and in the number of families and households. Thus, estimates of levels for 1981 and later may differ from those for 1980 and earlier more than what could be attributed to actual changes in the population. These differences could be disproportionately greater for certain subpopulation groups than for the total population.

Sampling Variability—The standard errors given in tables C-2 through C-5 are primarily measures of sampling variability, that is, of the variation that occurred by chance because a sample rather than the entire population was surveyed. The sample estimate and its standard error enable one to construct confidence intervals, ranges that would include the average result of all possible samples of the same size with a known probability. For example, if all possible samples of the same size were selected, each of these being surveyed under essentially the same general conditions and using the same sample design, and if an estimate and its standard error were calculated from each sample, then:

1. Approximately 68 percent of the intervals from one standard error below the estimate to one standard error above the estimate would include the average results of all possible samples.
2. Approximately 90 percent of the intervals from 1.6 standard errors below the estimate to 1.6 standard errors above the estimate would include the average result of all possible samples.
3. Approximately 95 percent of the intervals from two standard errors below the estimate to two standard errors above the estimate would include the average result of all possible samples.

The average estimate derived from all possible samples of the same size is or is not contained in any particular computed interval. However, for a particular sample, one can say with a specified confidence that the average estimate derived from all possible samples of the same size is included in the confidence interval.

Also, standard errors may be used to perform hypothesis testing, a procedure for distinguishing between population parameters using sample estimates. The most common types of hypotheses are: (1) the population parameters are identical, versus (2) they are different. An example of this would be comparing the percent of adults who were high school graduates in 1981 to those in 1971. Tests may be performed at various levels of significance, where a level of significance is the probability of concluding that the parameters are different when, in fact, they are identical. All statements of comparison in the text have passed a hypothesis test at the 0.10 level of significance or better, and most have passed a hypothesis test at the 0.05 level of significance or better. This means that, for most differences cited in the text, the estimated difference between parameters is greater than twice the standard error of the difference. For the other differences mentioned, the estimated difference between parameters is between 1.6 and 2.0 times the standard error of the difference. When this is the case, the statement of comparison will be qualified in some way; e.g., by the use of the phrase "some evidence."

Using Small Estimates—Summary measures (such as means, medians, and percent distributions) are shown when the base is 75,000 or greater. Because of the large standard errors involved, there is little chance that summary measures would reveal useful information when computed on a smaller base. Estimated numbers are shown, however, even though the relative standard errors of these numbers are larger than those for the corresponding percentages. These smaller estimates are provided primarily to permit such combinations of the categories as serve each user's needs.

Standard Error Tables and Their Use—In order to derive standard errors that would be applicable to a large number of estimates, a number of approximations were required. Therefore, instead of providing an individual standard error for each estimate, generalized sets of standard errors are provided for various types of characteristics. As a result the sets of standard errors provided give an indication of the order of magnitude of the standard error of an estimate rather than the precise standard error.

The figures presented in tables C-2 through C-5 are approximations to standard errors of various school enrollment estimates for persons in the United States. Estimated standard errors for specific characteristics cannot be obtained from tables C-2 through C-5 without the use of the factors in table C-6. The factors in table C-6 must be applied to the generalized standard errors in order to adjust for the combined effect of sample design and estimating procedure on the value of the characteristic. Standard errors for intermediate values not shown in the generalized tables of standard errors may be approximated by linear interpolation.

Two parameters (denoted "a" and "b") are used to calculate standard errors for each type of characteristic; they are also presented in table C-6. These parameters were used to calculate the factors in table C-6. They also may be used to directly calculate the standard errors for estimated numbers and percentages. Methods for direct computation are given in the following sections. The standard errors in tables C-2 through C-5 were calculated using the "b" parameters in table C-6; however, the "a" parameters used for tables C-2 and C-3 were revised to reflect the total persons in the age group.

Standard Errors of Estimated Numbers—The approximate standard error σ_x, of an estimated number can be obtained in two ways. It may be obtained by use of the formula

$$\sigma_x = f \cdot \sigma \qquad (1)$$

where "f" is the appropriate factor from table C-6 and σ is the standard error on the estimate obtained by interpolation from tables C-2 or C-3. Alternatively, standard errors may be approximated by using formula (2). The use of formula (1) will provide more accurate results when the number of persons in the age group is relatively small, otherwise the following formula will provide more accurate standard errors.

$$\sigma_x = \sqrt{ax^2 + bx} \qquad (2)$$

Here x is the size of the estimate and "a" and "b" are the parameters in table C-6 associated with the particular type of characteristic. When an estimate involves two different categories use the "a" and "b" parameters corresponding to the category with the larger "b" parameter.

Standard Errors of Estimated Percentages—The reliability of an estimated percentage, computed using sample data for both numerator and denominator, depends upon both the size of the percentage and the size of the total upon which this percentage is based. Estimated percentages are relatively more reliable than the corresponding estimates of the numerators of the percentages, particularly if the percentages are 50 percent or more. The approximate standard error, $\sigma_{(x,p)}$, of an estimated percentage can be obtained by use of the formula

$$\sigma_{(x,p)} = f \cdot \sigma \qquad (3)$$

In this formula, "f" is the appropriate factor from table C-6 and σ is the standard error on the estimate from table C-4 or C-5. When the numerator and denominator of the percentage are in different categories, use the factor or parameters from table C-6 indicated by the numerator. Alternatively, standard errors may be approximated by using formula (4), from which the standard errors in tables C-4 and C-5 were calculated. Use of this formula will provide more accurate results than use of formula (3).

$$\sigma_{(x,p)} = \sqrt{\frac{b}{x} \cdot p(100-p)} \qquad (4)$$

Here x is the size of the subclass of persons or families and unrelated individuals which is the base of the percentage, p is the percentage ($0<p<100$), and b is the parameter in table C-6 associated with the particular type of characteristic in the numerator of the percentage.

Illustration of Standard Error Computations—Table C shows that in 1981 there were 18,266,000 persons 30 to 34 years old. It was estimated that 1,211,000 persons 30 to 34 years old were college students in 1981. From table C-2, interpolation shows the standard error to be about 47,000 for an estimate of this size. Applying the appropriate factor from table C-6, and using formula (1) yields an approximate standard error[1] of 1.0 x (47,000) = 47,000. An approximate 90-percent confidence interval as computed from these data is from 1,135,800 to 1,286,200 (i.e., 1,211,000 ± [1.6 x 47,000]). Similarly, the 95-percent confidence interval is from 1,117,000 to 1,305,000 (i.e., 1,211,000 ± [2 x 47,000]).

Therefore, a conclusion that the average estimate derived from all possible samples of this same size lies within a range computed in this way would be correct for roughly 95 percent of all possible samples.

Table 1 shows that 9.4 percent of the 9,660,000 men 25 to 29 years old were enrolled in college in October 1981. Using formula (4) and the appropriate "b" parameter from table C-6, the approximated standard error of the estimate[2] is:

$$\sqrt{\frac{2014}{9{,}660{,}000} \times 9.4\,(100-9.4)} \approx .4$$

Thus, a 95-percent confidence interval for this estimate is from 8.6 to 10.2 (i.e., 9.4 ± (2 x .4).

Standard Error of a Difference—For a difference between two sample estimates, the standard error is approximately equal to

$$\sigma_{(x-y)} \approx \sqrt{\sigma_x^2 + \sigma_y^2} \qquad (5)$$

where σ_x and σ_y are the standard errors of the estimates x and y; the estimates can be numbers, percent, ratios, etc. This formula approximates the standard error quite accurately for the difference between two estimates of the same characteristics in two different areas, or for the difference between two separate and uncorrelated characteristics in the same area. If, however, there is a high positive (negative) correlation between the two characteristics, the formula will overestimate (underestimate) the true standard error.

Illustration of the Calculation of the Standard Error of a Difference—Table 1 shows that in October 1981 an estimated 9.4 percent of men 25 to 29 years old were enrolled in college as compared to 8.0 percent of women 25 to 29 years old. The approximate standard error of 9.4 percent was shown above to be .4. Similarly, the standard error of 8.0 percent is found to be approximately .4. The apparent difference between these two estimates is 1.4 percent. Thus, by formula (5) the standard error of the estimated difference, 1.4 percent, is:

$$\sqrt{(.4)^2 + (.4)^2} \approx .6$$

This means that a 95-percent confidence interval about the difference of 1.4 is from .2 to 2.6 percent. Therefore, a conclusion that the average estimate derived from all possible samples of this same size lies within a range computed in this way would be correct for roughly 95 percent of all possible samples. Since this particular confidence interval does not include zero, it can be said with 95-percent confidence that the actual percent of men 25 to 29 years old enrolled in college is greater than the percent of women.

[1] Using formula (2) and table C-6 gives a standard error of approximately

$$\sqrt{-.000025(1{,}211{,}000)^2 + 2014(1{,}211{,}000)} \approx 49{,}000$$

[2] Using formula (3), interpolation from table C-4, and multiplying by the appropriate factors from table C-6 gives a standard error of the estimate of approximately .4.

Table C-2. Generalized Standard Errors for Estimated Numbers of Persons—All Races or White

(In thousands. For meaning of symbols, see page 126)

Estimated number of persons	Total persons in age group									
	100	250	500	1,000	2,500	5,000	10,000	25,000	50,000	100,000
10	4.3	4.4	4.4	4.5	4.5	4.5	4.5	4.5	4.5	4.5
20	5.7	6.1	6.2	6.3	6.3	6.3	6.3	6.3	6.3	6.3
30	6.5	7.3	7.5	7.7	7.7	7.7	7.8	7.8	7.8	7.8
40	7.0	8.2	8.6	8.8	8.9	8.9	9.0	9.0	9.0	9.0
50	7.1	9.0	9.5	9.8	9.9	10.0	10.0	10.0	10.0	10.0
75	6.1	10.3	11.3	11.8	12.1	12.2	12.2	12.3	12.3	12.3
100	-	11.0	12.7	13.5	13.9	14.0	14.1	14.2	14.2	14.2
200	-	9.0	15.5	18.0	19.3	19.7	19.9	20.0	20.0	20.0
300	-	-	15.5	20.6	23.1	23.8	24.2	24.4	24.5	24.5
400	-	-	12.7	22.0	26.0	27.2	27.8	28.2	28.3	28.3
500	-	-	-	22.4	28.4	30.1	30.9	31.4	31.6	31.7
750	-	-	-	19.4	32.5	35.8	37.4	38.3	38.6	38.7
1,000	-	-	-	-	34.8	40.1	42.6	44.0	44.4	44.7
2,000	-	-	-	-	28.4	49.2	56.8	60.9	62.2	62.8
3,000	-	-	-	-	-	49.2	65.0	72.9	75.4	76.6
4,000	-	-	-	-	-	40.1	69.5	82.3	86.1	87.9
5,000	-	-	-	-	-	-	71.0	89.8	95.2	97.8
7,500	-	-	-	-	-	-	61.5	102.8	113.3	118.2
10,000	-	-	-	-	-	-	-	109.9	126.9	134.6
20,000	-	-	-	-	-	-	-	89.8	155.5	179.5
30,000	-	-	-	-	-	-	-	-	155.5	205.7
40,000	-	-	-	-	-	-	-	-	126.9	219.9
50,000	-	-	-	-	-	-	-	-	-	224.4
75,000	-	-	-	-	-	-	-	-	-	196.3
100,000	-	-	-	-	-	-	-	-	-	-

Note: These values must be multiplied by the appropriate "f" factor in table C-6 to obtain the standard error for a specific characteristic. To estimate the standard errors for the 1956-66 period, multiply these standard errors by 1.23. For years prior to 1956, multiply by 1.5.

Table C-3. Generalized Standard Errors for Estimated Numbers of Persons—Black and Other Races

(In thousands. For meaning of symbols, see page 126)

Estimated number of persons	Total persons in age group						
	100	250	500	1,000	2,500	5,000	10,000
10	4.5	4.7	4.7	4.7	4.7	4.8	4.8
20	6.0	6.5	6.6	6.7	6.7	6.7	6.7
30	6.9	7.7	8.0	8.1	8.2	8.2	8.2
40	7.4	8.7	9.1	9.3	9.4	9.5	9.5
50	7.5	9.5	10.1	10.4	10.5	10.6	10.6
75	6.5	10.9	12.0	12.5	12.8	12.9	13.0
100	-	11.7	13.5	14.3	14.7	14.9	15.0
200	-	9.5	16.5	19.0	20.4	20.9	21.1
300	-	-	16.5	21.8	24.3	25.3	25.7
400	-	-	13.5	23.3	27.6	28.9	29.5
500	-	-	-	23.8	30.1	31.9	32.8
750	-	-	-	20.6	34.3	38.0	39.6
1,000	-	-	-	-	36.9	42.6	45.1
2,000	-	-	-	-	30.1	52.1	60.2
3,000	-	-	-	-	-	52.1	69.0
4,000	-	-	-	-	-	42.6	73.7
5,000	-	-	-	-	-	-	75.2
7,500	-	-	-	-	-	-	65.2
10,000	-	-	-	-	-	-	-

Note: These values must be multiplied by the appropriate "f" factor in table C-6 to obtain the standard error for a specific characteristic. To estimate the standard errors for the 1956-66 period, multiply these standard errors by 1.23. For years prior to 1956, multiply by 1.5.

Table C-4. Generalized Standard Errors of Estimated Percentages—All Races or White

Base of percentage (thousands)	Estimated percentage				
	2 or 98	5 or 95	10 or 90	25 or 75	50
100	2.0	3.1	4.3	6.1	7.1
250	1.3	2.0	2.7	3.9	4.5
500	0.9	1.4	1.9	2.7	3.2
1,000	0.6	1.0	1.3	1.9	2.2
2,500	0.4	0.6	0.9	1.2	1.4
5,000	0.3	0.4	0.6	0.9	1.0
10,000	0.2	0.3	0.4	0.6	0.7
25,000	0.1	0.2	0.3	0.4	0.4
50,000	0.1	0.1	0.2	0.3	0.3
100,000	0.1	0.1	0.1	0.2	0.2
150,000	0.1	0.1	0.1	0.2	0.2

Note: These values must be multiplied by the appropriate "f" factor in table C-6 to obtain the standard error for a specific characteristic. To estimate the standard errors for the 1956-66 period, multiply these standard errors by 1.23. For years prior to 1956, multiply by 1.5.

Table C-5. Generalized Standard Errors of Estimated Percentages—Black and Other Races

Base of percentage (thousands)	Estimated percentages				
	2 or 98	5 or 95	10 or 90	25 or 75	50
75	2.4	3.8	5.2	7.5	8.7
100	2.1	3.3	4.5	6.5	7.5
250	1.3	2.1	2.9	4.1	4.8
500	0.9	1.5	2.0	2.9	3.4
1,000	0.7	1.0	1.4	2.1	2.4
2,500	0.4	0.7	0.9	1.3	1.5
5,000	0.3	0.5	0.6	0.9	1.1
10,000	0.2	0.3	0.5	0.7	0.8
15,000	0.2	0.3	0.4	0.5	0.6
20,000	0.1	0.2	0.3	0.5	0.5

Note: These values must be multiplied by the appropriate "f" factors in table C-6 to obtain the standard error for a specific characteristic. To estimate the standard errors for the 1956-66 period, multiply these standard errors by 1.23. For years prior to 1956, multiply by 1.5.

Table C-6. "a" and "b" Parameters and "f" Factor for Calculating Approximate Standard Errors of Estimated Numbers and and Percentages

(For meaning of symbols, see page 126)

Characteristic	Persons			Families or family heads		
	Parameter			Parameter		
	a	b	f factor	a	b	f factor
Persons enrolled in school, 14 to 34 years old:						
All races or White	-0.000025	2,014	1.0	-0.000010	1,389	0.8
Black	-0.000179	2,265	1.0	-0.000087	1,255	0.7
Spanish origin[1] (levels)	±0.001519	1,856	(X)	-0.000033	2,397	1.1
Spanish origin[1] (percentages only)	(X)	3,374	1.3	(X)	(X)	(X)
Children enrolled in school, 3 to 13 years old, all race groups and Spanish origin	-0.000063	2,350	1.1	(X)	(X)	(X)
Marital status, household, and family:						
All races or White	-0.000017	3,500	1.3	(X)	(X)	(X)
Black	-0.000210	5,020	1.5	(X)	(X)	(X)
Spanish origin[1]	-0.000043	7,469	1.9	(X)	(X)	(X)
Income:						
Persons tabulated by family:						
All races or White	-0.000018	3,770	1.4	(X)	(X)	(X)
Black	-0.000154	4,310	1.4	(X)	(X)	(X)
Spanish origin[1]	-0.000067	10,112	2.2	(X)	(X)	(X)
Residence:						
All races or White	-0.000024	4,253	1.5	-0.000016	2,170	1.0
Black	-0.000308	7,402	1.8	-0.000178	2,561	1.1
Spanish origin[1]	-0.000074	15,027	2.7	-0.000014	2,844	1.2

[1]To compute standard errors for school enrollment levels (number of persons), only use formula (2). To calculate any other Spanish standard errors either use formulas (1) or (2), or use the generalized standard errors from tables C-2 or C-4 in conjunction with formulas (1) or (3).

Note: (a) For nonmetropolitan data cross-tabulated with other data, also apply the factor 1.2 to the "f" factor and the factor 1.5 to the "a" and "b" parameters. (b) Multiply the "a" and "b" parameters by 1.5 for CPS data collected from 1956 to 1966 and by 2.25 for CPS data collected before 1956. (c) For western census region data cross-tabulated with other data, also apply the factor .92 to the "f" factor and .84 to the "b" parameter (for any race or Spanish Origin). Also multiply the "a" parameter by .84 for only the all races or white category.

County and City Data Book ,1983

10th Edition

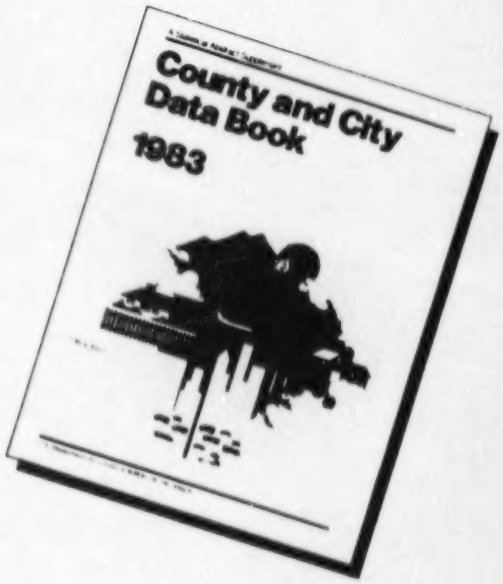
A must for . . .

Market researchers	Economists
Business analysts	Teachers
Legislators	Librarians
Social scientists	Students
Planners	. . .The list is endless

The County and City Data Book, 1983, is an indispensable reference to social and economic data on States, counties, cities, and places, all in one compact volume. It contains information on a variety of subjects, including population, age distribution, educational attainment, money and personal income, housing value and ownership, births, deaths, poverty, local and city government finance and employment, health care, human services, business, banking, climate, elections, and social programs. Many new data items are presented for the first time in the Data Book, including nurses, nursing homes, Medicare, journey to work, workers in families, and Moody's bond ratings. Also featured are rankings of selected socioeconomic measures for cities and counties.

The County and City Data Book, 1983, holds 1,064 factfilled pages on the entire United States; 50 States; and the District of Columbia; census regions; 9 census divisions; 3,137 counties and county equivalents; 945 incorporated cities with 25,000 or more inhabitants; and approximately 10,000 places, towns, and townships of 2,500 or more inhabitants in 1980.

It presents 216 data items for regions, divisions, States, counties, and county equivalents; 170 items for cities with 25,000 or more inhabitants in 1980; and 15 items for places with 2,500 or more inhabitants in 1980; and 15 items for towns and townships of 2,500 or more in 11 States.



The County and City Data Book, 1983, is an invaluable guide to your data needs and to the needs of your organization.

Use the GPO order form below to order your copy today. $24 (clothbound.)
